

Elite Ti — Marketing Execution Plan (Two-Tier Operating System)

Purpose: turn marketing into a repeatable machine with a clear division of labor between a **human creative agent** and an **AI positioning/distribution agent**, plus a catalog-spanning email/SMS program that's pre-built so campaigns fire on schedule.

Companion document: **Go-To-Market Promo & Discount Calendar** (the *what we sell, when, and at what price* report). This document is the *how we operate and where we post* report.

1. The two-tier model at a glance

	Tier 1 — Human Agent (Creative)	Tier 2 — AI Agent (Positioning & Owned Channels)
Who	Current social marketer (the ~\$100/mo creative hire)	Claude / sub-agent, supervised by Luna
Owns	Making the assets + native posting	Positioning, distribution, email/SMS, attribution
Does	Photos, carousels, Reels/TikToks, captions; posts natively to FB, IG, TikTok (+ new platforms)	Klaviyo email/SMS, reshares social into the right groups, Reddit/forum posting via desktop browser, UTM tracking, reporting
Does not	Decide strategy, discounts, or where to distribute beyond the main pages	Shoot/edit creative
Reports to	Luna / Nate	Luna / Nate

The core idea: the human is a **creative engine**, not a strategist. The AI agent is the **distribution + positioning engine** that takes her finished assets and gets them in front of *actual buyers* — through owned email/SMS and by syndicating into model-specific communities.

2. Roles & responsibilities (RACI)

Activity	Human Agent	AI Agent (Luna-run)	Nate / Luna
Content calendar (what to shoot)	Executes	Drafts/Recommends	Approves
Photo / carousel / video creation	Owns	—	Spot-approves
Native posting (FB / IG / TikTok feed)	Owns	Assists captions+timing w/	—
Resharing posts into FB/IG groups	Supports	Owns (browser)	—
Reddit / forum posting	—	Owns (browser)	—
Email & SMS (Klaviyo)	—	Owns	Approves sends
Discount/promo positioning	—	Owns	Approves codes
UTM links + attribution	—	Owns	Reviews
Weekly report	Inputs	Compiles	Reviews

Activity	Human Agent	AI Agent (Luna-run)	Nate / Luna
Discount code creation in Shopify	—	Prefills (on approval)	Approves & activates

3. How the AI agent "reacts" — its operating system

The AI agent runs on a **trigger → action** model so it's never idle and never freelancing.

Standing weekly loop

- Monday — Plan:** pull the promo calendar, confirm this week's campaign(s), draft the email/SMS + the group/forum syndication plan, hand the human agent a shot list.
- Tue-Thu — Distribute:** as the human posts natively, the AI reshapes each post into the matching model groups, posts value-first to Reddit/forums, and schedules the Klaviyo send.
- Friday — Measure:** compile the weekly report (revenue by UTM, list growth, what landed), flag what to double down on next week.

Event triggers (it reacts to these)

Trigger	AI agent action
New product / group buy goes live	Build launch email+SMS, write group/forum posts, generate UTM links, brief human on creative
Promo code approved (from calendar)	Schedule the full send sequence + group syndication, set reminders for last-48hr push
Container/restock lands	"Back in stock" flow to waitlist + the model's buyers, group posts
Cart/checkout abandoned	(Automated Klaviyo flow — see §6)
Campaign ends	Pull results, log to report, archive the code

What it uses a desktop browser for

- **Resharing** the human's IG/FB posts directly into the relevant **Facebook/Instagram groups** (model-specific) from the brand pages.
- **Reddit** posts/comments in r/RX7, r/supra, r/Nissan GT-R, r/350z, r/JDM, etc. — value-first, not spam (see guardrails §9).
- **Forum** group-buy threads and vendor sections (rx7club, supraforums/mkiv, clublexus, GTR forums, EvolutionM, etc.).

4. Channel ownership map (who posts where)

Channel	Posted by	Notes
Instagram feed/Reels/Stories	Human (native)	Primary creative surface
Facebook Page	Human (native)	
TikTok	Human (native)	Newly connecting — prioritize, it's the cheapest reach right now
YouTube Shorts	Human (repurpose Reels)	Evergreen + SEO
FB/IG Groups	AI (reshare from pages)	Model-specific; highest-intent for group buys
Reddit	AI (browser)	Strict self-promo etiquette

Channel	Posted by	Notes
Forums	AI (browser)	Vendor sections + group-buy threads
Email + SMS (Klaviyo)	AI	Owned audience — the biggest current gap
Pinterest (optional)	Human (repurpose)	Long-tail search for build inspo

5. Direction for the human agent (where to put each asset)

She needs a **standing distribution sheet** so every asset has a home. Template:

Asset type	Post to	Cadence
New product hero shot	IG feed + FB page + (AI reshares to that model's groups)	Each new SKU
Build/customer car feature (UGC)	IG Reels + TikTok + Stories	2-3×/week
Install / tech clip	TikTok + YT Shorts + IG Reels	1-2×/week
Group-buy countdown	IG Stories + FB page + (AI to groups + email/SMS)	Per campaign arc
Behind-the-scenes (titanium/carbon)	IG Reels + TikTok	1×/week
Promo/sale announcement	All native + (AI: groups, email, SMS, retargeting)	Per promo

Creative specs to standardize: vertical 9:16 for Reels/TikTok/Shorts, 4:5 for IG feed, consistent logo bug, on-brand color, captioned (sound-off viewing). Give her a Canva Brand Kit so output is consistent without her making brand decisions.

6. Catalog-spanning Email & SMS program (Klaviyo) — pre-built

This is the engine that monetizes the whole catalog, not just the hero models. Set it up once; it runs forever.

A. Always-on flows (build first)

Flow	Trigger	Why it matters at ~\$1,000 AOV
Welcome / new subscriber	Signs up (popup, link-in-bio)	Captures the build-researcher early
Abandoned cart	Adds to cart, no checkout	Highest-ROI flow for high-ticket
Abandoned checkout	Reaches checkout, no purchase	Recover big orders
Browse abandonment	Views product, leaves	Model-aware: "still eyeing the FD hood?"
Post-purchase	Order placed	Install tips, cross-sell same-model parts, ask for UGC
Win-back	No purchase in 90/180 days	Re-engage past buyers
Back-in-stock / waitlist	Restock or container lands	Pairs with container sales

B. Segmentation (so emails are relevant across the catalog)

Segment by **platform interest** using collection/tag behavior — RX-7 buyers get RX-7 emails, GTR buyers get GTR emails, etc. Key segments: - Per-model buyers & browsers (RX-7, Supra MK4/MK5, GTR R32-R35, Evo, 350Z/370Z, GT86, RX8, Honda, BMW, Tesla, Porsche, Mitsubishi, SC300/400...) - Universal/Titanium-hardware buyers (cross-platform upsell) - High-value buyers (>\$2,000 lifetime) → early access to drops & group buys - Engaged non-buyers → nurture

C. Campaign calendar (broadcasts)

One **catalog-wide newsletter** every ~2 weeks + the **promo sends** from the Go-To-Market calendar. Rotate the model spotlight so every major platform gets featured each quarter. Each promo = a 3-touch send: **launch** → **mid-point/tier** → **last 48 hrs**, plus SMS on the open and the final day.

Why this is urgent: owned email/SMS is currently near-zero, yet it's the cheapest way to reach *people who already want our parts*. For a \$1,000-AOV store this is the single highest- ROI addition.

7. Tooling & access

Tool	Status	Who runs it	Purpose
Metricool	✓ Have	Human	Schedule + analytics for IG/FB/TikTok
Klaviyo	+ Add (priority)	AI / Luna	Email + SMS flows & campaigns
Canva Brand Kit	+ Add	Human	Consistent creative
Shopify staff (scoped)	+ Add	AI / Luna	Discount prefill, landing pages, product links
Meta Business Suite (partner access)	+ Add	AI + Human	Groups, page, retargeting ads
Desktop browser profile	+ Set up	AI	Group/Reddit/forum posting
Shared asset library (Drive)	+ Add	Both	Photos, logos, the two plan PDFs
Discord (optional)	+ Consider	AI	Owned community for repeat group buys

Access split: Human gets Metricool + Canva + the page/IG logins she needs to post. AI/Luna gets Klaviyo + scoped Shopify + Meta partner access + the browser profile. Keep finance/customer PII out of the human agent's Shopify scope.

8. Attribution — stop flying blind

Today most revenue shows as "direct/unattributed" and social is one giant bucket. Fix it: -

UTM-tag every link the AI agent distributes:

?utm_source=<platform>&utm_medium=<social|forum|email|sms>&utm_campaign=<promo-code> - One campaign tag per promo (matches the discount code, e.g. sevens-day-2026). - This turns "\$117K social" into per-platform, per-campaign numbers so we double down on what actually converts (likely Groups + Email).

9. Guardrails

- **Brand voice:** enthusiast-to-enthusiast, technical, no hype-spam. The AI drafts; Luna/Nate approve anything new the first time.
- **Group/forum etiquette:** respect each group's vendor rules. Lead with value (build content, tech), not just "buy now." Space posts; don't blast the same copy everywhere same-hour.
- **Reddit:** follow each sub's self-promotion ratio; participate, don't just advertise. A ban there is permanent and costs us a channel.
- **Discounts:** only codes from the approved promo calendar, always with a hard end date.

- **Approvals:** Nate approves discount codes; Luna approves email/SMS sends; first-time creative formats get a spot-check.
-

10. First 30 days (stand-up checklist)

- [] Stand up Klaviyo; connect to Shopify; build the 7 always-on flows
- [] Build core per-model segments + high-value segment
- [] Create Canva Brand Kit; hand human the distribution sheet + shot list
- [] Set up AI desktop browser profile + Meta partner access
- [] Compile the target **group/forum list** per platform
- [] Implement UTM convention + a saved link builder
- [] Launch the first scheduled promo from the Go-To-Market calendar end-to-end as the pilot
- [] First Friday report: revenue by UTM, list growth, what landed
